

Web app, desktop, or both?

TODAY

Web app

Deployed to GitHub Pages. URL is live, pipeline is working.

OPTION

Vercel / Netlify

Same web concept — faster loads, similar setup. Easy migration if needed.

ALSO POSSIBLE

Windows / Android

Unity can build native executables from the same project. One extra click.

Past course projects shipped Windows + Android builds. We can do both — we'd appreciate your guidance on priority.
